PROMPT:Assessing Prompt Output

"ChatGPT, take the previous AI-generated response based on a specific command. Please Assess the output based on the following criteria:

Accuracy: Compare the AI's output against any well-known or universally accepted facts and data. Does it seem accurate?

Relevance: Determine if the output strictly adheres to the original command. Has it addressed the main points or veered off-topic?

Completeness: Analyze whether the response seems comprehensive covering all the points of the command.

Format alignment: Does the output conform to any specified format or structure?

Ambiguities: Identify any parts of the output that could be unclear or open to interpretation.

Example Consistency: If the original prompt chain or command provided examples, ensure the output matches the style or pattern of those examples.

Given this, please assess the following AI-generated output: {AI-generated response}.

The prompt is designed to guide ChatGPT through the evaluation process step by step. When you replace the previous message with the actual output you want to be assessed, ChatGPT should provide a detailed evaluation based on the criteria."
